

Citrulline 500 mg

GPH Capsules

Product description:

Citrulline is a non-proteinogenic amino acid, which means it is not involved in the formation of proteins. Rather, citrulline is an intermediate product of the urea cycle. In this process, nitrogenous metabolites are converted and then excreted in the urine. Citrulline is the precursor of arginine and is therefore popular with sports enthusiasts. For athletes in particular, strength and endurance are a fundamental issue and more energy leads to a better performance. Moreover, arginine is the sole precursor for the formation of nitric oxide (NO), a small substance that supports the blood flow to the muscles. Citrulline 500 mg GPH Capsules contain pure citrulline and are free from any fillers.

Application areas:

- For an optimal supply of citrulline and arginine
- For athletes For more energy

Composition:

L-citrulline; Gelatin*, Colorant*: Ironoxides and -hydroxides; quinoline yellow**, crimson**

*Capsule shell

**May affect childrens activity and attention!

Recommended use:

Adults: Take 2 x 2 capsules daily with a generous amount of liquid.

4 Capsules contain 2000 mg l-citrulline.
